ColorMatic Features

ColorMatic continues the strong RocketTheme tradition of full featured templates with lots of goodies and capabilities that will enable your site to stand out from the pack

-
  15 distinctive color styles
  Not just your boring blue/green/red combos either, these are gorgeous!

-
  Fresh & Clean Web 2.0 design
  What we call 'Web 2.0' design generally means clean simple designs with larger clearer fonts and the sprinkling of icons and images to spice things up.

-
  16 collapsible module positions
  What is probably the most module positions used to date, ColorMatic tastefully integrates a white variety of module positions that will collapse when not populated.

-
  Easily change width or set to fluid
  Now easier than ever, just change one variable in index.php to instantly change the width of the entire site to better suit your content needs.

-
  Flexible pull-down panel
  Using a mootools based system we've created a simple but effective way to put modules on your page without taking up valuable real estate. The script has been compressed for maximum speed, but you can still control the slide speed, tab open/close text, and overall slider size.

-
  Slimbox integration
  Slimbox is a faster leaner alternative to LightBox 2.0 utilizing a highly optimized and compressed version of the mootools javascript library. Using the latest version of Slimbox and incorporating a new "fix" ColorMatic is now able to use slimbox at the same time as sfwObject based flash modules and scripts

-
  SuckerFish Drop-Down Menu & SplitMenu options
  SuckerFish is the default offering for this template, but we've also included SplitMenu. Check out the menu tutorials to better understand how to take advantage of the features these menus offer.

-
  Lots of great typography
  ColorMatic has bunches of great typographical styles to help your content look great without even trying! Check out the great notice styles to allow you to provide great visual focus for your users

-
  Custom Modules
  As in past templates we've provided two variations of standard modules, and a new custom module. These variations for the Login Module and for Latest News Module provide just enough design element changes to break away from the standard Joomla! sample content and give your site a distinctive look. The new Flickr Badge Module allows you to seamlessly add Flickr images to your site.

- Fully compatible IE6, IE7, Safari 2, Firefox 1.5+, Opera 9, OmniWeb, Shira, Netscape.

- XHTML 1.0 Transitional. Valid XHTML and CSS.

- Source Adobe Fireworks PNG and Fonts included

- Blank Logos and Buttons for quick/easy modification
